

**AMENDMENTS TO THE CLAIMS**

1-10. (Cancelled)

11. (Original) A self-charging organic electroluminescent display module, comprising:

a common substrate;

at least one solar cell formed on the common substrate;

an opaque insulating layer formed on the solar cell; and

an organic electroluminescent device formed on the opaque insulating layer;

wherein the solar cell provides necessary electrical power for the organic electroluminescent device to function and the common substrate, the solar cell, and the organic electroluminescent device are packaged together.

12. (Previously Presented) The self-charging organic electroluminescent display module of claim 11, further comprising a common cover corresponding to the locations of the solar cell and the organic electroluminescent device, wherein a packaging adhesive is employed to combine the common substrate and the common cover.

13. (Previously Presented) The self-charging organic electroluminescent display module of claim 11, wherein the solar cell is an inorganic solar cell.

14. (Previously Presented) The self-charging organic electroluminescent display module of claim 11, wherein the solar cell is an inorganic solar cell.

15-18. (Cancelled)
